Use Of Odd Lengths

The investigation carried on last year by the U. S. Department of Agriculture, cooperating with himber manufacturers in the South, to Wailua River 6 determine the saving that can be Kapaa landing 9 effected by using odd lengths of Kealia lumber as well even, has begun to Anahola Kilattea bear fruit. That investigation Kilauea landing 26 Haena caves 11 showed that a material saving was Kalalau practicable, and at a recent meeting of a southern lumber manufac- To turers association the fact was Nawiliwili brought out that a beginning has Koloa been made in putting the new plan Waimea into practice, and that an increase in the sale of odd lengths is antic- Some Descriptive Pointers ipated for the near future.

It was formerly the custom, and generally is so still, to sell lumber in even lengths only. Waste resulted from cutting off the ends of odd lengths to make them even. A considerable percentage of a sawmill's output is defective. That is, boards have had knots, decaved spots, or split ends, and the defective parts are cut out. To make an even length of what remains, it is often necessary to cut off a foot of good wood with the bad, and it is wasted. The practice of marketing odd lengths as well as even is meant to lessen this waste. The sale of odd lengths of lumber will frequently lessen waste in the woods also; for exampie, a log may be cut fifteen feet splendid paranoma of plains, mounlong which, following the old cus- tains and sea. tom, would be cut only fourteen, and the extra foot would be left in the Wailua river.

meets with opposition from many tropical forests. builders who are prejudiced in favor of even lengths simply because they have never used a n y other kind. Nevertheless, there are many places in which odd lengths are more economical than even ones-for instance, where nine-foot studding it used. Following former custom, the ends must be cut from even lengths to make the timbers fit. Some manufacturers of flooring successfuly sell odd and even lengths, thus lessening waste in the woods, at the mill, and in the construction of buildings.
